

## ACCESS FROM ANYWHERE

WebClock is our timekeeping solution that provides the ultimate convenience and availability when it comes to workforce management software. Its design is perfect for both in-house and remote teams, and all you need to get started is a URL and internet connection. Worried about managing where and when your employees' clock in and out? The Cloud allows you to set up restrictions based on Public IP Addresses, giving you control of where your business can go. WebClock is constantly kept up-to-date and functional, ensuring you will always remain at the cutting edge of timekeeping technology.

MobileClock is a sleek mobile app built with the same capabilities as our other time collection devices. Use MobileClock for mobile and remote employees or incorporate it into your everyday operations as a safe, single-user device. The Cloud's built-in Geofencing feature can help eliminate fraud with geolocation tracking. At the same time, mobile restrictions control what employees can and cannot do in the app based on user settings or location, which are configurable per employee.

Equipped with a built-in messaging system, the Cloud gives employees a one-stop-shop for all their work needs. Employees can request time off, view schedules and hours worked or contact their manager all from the WebClock dashboard or MobileClock app. This communication can boost employee engagement while saving them time and resources.

## MAKE DECISIONS IN REAL-TIME

Optimize your workforce management with the Cloud's real-time solution. The Cloud facilitates instant and continuous data updates, allowing you to manage your employees effectively. Monitor employees approaching overtime, punch locations on clock in and clock out, any shift notes created by employees and more with real-time dashboards and reports. Provide your managers with the technology to make real-time business decisions – wherever they are.

## ENSURE NECESSARY COMPLIANCE

The Cloud is hosted within industry-leading United States data centers that are SOC 2 compliant, ensuring the security, availability, processing integrity, confidentiality, and privacy of customer data. These secure facilities offer environmental protection, advanced network security, and processes and appliances to maintain the highest data security levels.

Our certified security team performs continuous backups and adheres to strict recovery time and recovery point objectives. The Cloud is consistently updated to meet WCAG accessibility compliance. This is methodically and verified continuously to ensure that our solution holds up to the highest compliance standards.
